Course :- Digital Literacy

Subject :- Report

Task 01

I created a digital literacy infographic using Canva. The infographic covers important topics such as the meaning of digital literacy, useful tools for students, safe internet practices, and professional online presence.

I included tools like Google Docs, Canva, and PowerPoint to show how students use digital platforms in daily academic work. I also highlighted key safety practices such as avoiding unknown links and using strong passwords.

While creating this infographic, I found it interesting to combine visual elements with information in a simple and clear way. The most challenging part was selecting the right content and arranging it in a visually appealing format.

Task 02

I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. GitHub helps in showcasing projects and technical work, while LinkedIn is useful for building a professional network and finding internship opportunities. Kaggle is used for practicing data science and improving problem-solving skills.

Creating these profiles helped me understand the importance of having a professional online presence. In the next four years, I plan to regularly update my profiles with new skills and projects.

Task 03

I explored coding and collaboration platforms. I created an account on HackerRank and solved a beginner-level problem, which helped me understand basic problem-solving skills.

I also created a Google Form titled “Digital Literacy Quiz” with five questions to test awareness among students. This activity helped me understand how online tools can be used for learning and collaboration.

These platforms are useful for improving technical skills and conducting interactive learning activities.

Task 04

I learned the importance of professional communication. I wrote two emails, one requesting an assignment extension and another applying for an internship. This helped me understand how to use proper tone, subject lines, and structure in emails.

I also created a checklist for responsible social media use. It highlights the importance of privacy, respectful communication, and online safety. This task made me realize how important digital etiquette is in both academic and professional environments.

Task 05

I studied phishing as a common cybercrime. I learned how attackers trick users into sharing sensitive information through fake messages and websites.

What surprised me most is how realistic these scams can appear, making it easy for people to fall victim. This task helped me understand the importance of verifying sources and being cautious online.

As a result, I will be more careful while clicking links and sharing personal information in the future.
